economically viable size, in which case the Trustees may determine to liquidate the series at a time that may not be opportune for shareholders. Any general expenses of the Trust not readily identifiable as belonging to a particular series are allocated by or under the direction of the Trustees in such manner as the Trustees determine to be fair and equitable. No shareholder is liable to further calls or to assessment by the Trust without his or her express consent.

Each Fund offers three classes of shares: Class A, Class C and Class I Shares. Each share class represents an interest in the same assets of a Fund, has the same rights and is identical in all material respects except that (i) each class of shares may bear different distribution fees; (ii) each class of shares may be subject to different (or no) sales charges; (iii) certain other class specific expenses will be borne solely by the class to which such expenses are attributable; and (iv) each class has exclusive voting rights with respect to matters relating to its own distribution arrangements. The Board of Trustees may classify and reclassify the shares of a Fund into additional classes of shares at a future date.

INVESTMENT RESTRICTIONS

The following investment restrictions are fundamental policies of the Funds and cannot be changed unless the change is approved by the lesser of (a) 67% or more of the shares present at a meeting of shareholders if the holders of more than 50% of the outstanding voting shares of that Fund are present or represented by proxy or (b) more than 50% of the outstanding voting shares of that Fund.

As a matter of fundamental policy, each Fund, except as otherwise noted, may not:

(a) borrow money, except as permitted under the 1940 Act, and as interpreted or modified by regulatory authority having jurisdiction, from time to time;

(b) issue senior securities, except as permitted under the 1940 Act, and as interpreted or modified by regulatory authority having jurisdiction, from time to time;

(c) engage in the business of underwriting securities issued by others, except to the extent that a Fund may be deemed to be an underwriter in connection with the disposition of portfolio securities;

(d) purchase or sell real estate, which does not include securities of companies which deal in real estate or mortgages or investments secured by real estate or interests therein, except that each Fund reserves freedom of action to hold and to sell real estate acquired as a result of the Fund's ownership of securities;

(e) purchase or sell physical commodities or forward contracts relating to physical commodities;

(f) With respect to all of the Funds except Auctos Multi-Strategy Fund, make loans to other persons, except (i) loans of portfolio securities, and (ii) to the extent that entry into repurchase agreements and the purchase of debt instruments or interests in indebtedness in accordance with a Fund's investment objective and policies may be deemed to be loans. With respect to Auctos Multi-Strategy Fund, make loans to others, except (a) where each loan is represented by a note executed by the borrower, (b) through the purchase of debt securities in accordance with its investment objectives and policies, (c) to the extent the entry into a repurchase agreement, in a manner consistent with the Fund's investment policies or as otherwise permitted under the 1940 Act, is deemed to be a loan, and (d) by loaning portfolio securities.

(g) invest 25% or more of its total assets in a particular industry or group of industries. This limitation is not applicable to investments in obligations issued or guaranteed by the U.S. government, its agencies and instrumentalities or repurchase agreements with respect thereto.

(h) (*Hedged Insider Fund, Insider Buying Fund, GOI Fund, Global TRI Fund and Global Appreciation Fund Only*) With respect to 75% of the Fund's total assets, purchase the securities of any issuer, except securities issued or guaranteed by the U.S. government or any of its agencies or instrumentalities or securities issued by other investment companies, if, as a result (i) more than 5% of the

Fund's total assets would be invested in securities of that issuer, or (ii) the Fund would hold more than 10% of the outstanding voting securities of that issuer.

OTHER INVESTMENT POLICIES

The following investment policies are not fundamental and may be changed by the Board without the approval of the shareholders of the Funds:

(a) No Fund will invest more than 15% of its net assets in securities for which there are legal or contractual restrictions on resale and other illiquid securities. Rule 144A securities with registration rights are not considered to be illiquid;

(b) No Fund will purchase securities or evidences of interest thereon on "margin." This limitation is not applicable to short-term credit obtained by a Fund for the clearance of purchases and sales or redemption of securities, or to arrangements with respect to transactions involving futures contracts, and other permitted investments and techniques;

(c) No Fund will mortgage, pledge, hypothecate or in any manner transfer, as security for indebtedness, any assets of the Fund except as may be necessary in connection with permitted borrowings. No Fund will mortgage, pledge or hypothecate more than 1/3 of its assets as collateral for such borrowing, and immediately after such borrowing the Fund shall maintain asset coverage of 300% of all borrowing. Margin deposits, security interests, liens and collateral arrangements with respect to transactions involving options, futures contracts, short sales, securities lending and other permitted investments and techniques are not deemed to be a mortgage, pledge or hypothecation of assets for purposes of this limitation;

(d) No Fund will purchase any security while borrowings (including reverse repurchase transactions) representing more than one third of its total assets are outstanding.

(e) (*MLP and Infrastructure Fund only*) Under normal conditions, the Fund will invest at least 80% of the Fund's net assets plus any borrowings for investment purposes in the securities of master limited partnerships ("MLPs"), general partners of MLPs ("GPs") and other businesses that derive a majority of their revenue from energy infrastructure activities.

If a restriction on the Fund's investments is adhered to at the time an investment is made, a subsequent change in the percentage of Fund assets invested in certain securities or other instruments, or change in average duration of the Fund's investment portfolio, resulting from changes in the value of the Fund's total assets, will not be considered a violation of the restriction; provided, however, that the asset coverage requirement applicable to borrowings shall be maintained in the manner contemplated by applicable law.

Temporary Defensive Positions

From time to time, the Funds may take temporary defensive positions, which are inconsistent with a Fund's principal investment strategies, in attempting to respond to adverse market, economic, political, or other conditions. For example, a Fund may hold all or a portion of its assets in money market instruments, including cash, cash equivalents, U.S. government securities, other investment grade fixed income securities, certificates of deposit, bankers acceptances, commercial paper, money market funds and repurchase agreements. While the Fund is in a defensive position, the opportunity to achieve its investment objective will be limited. If a Fund invests in a money market fund, the shareholders of the Fund generally will be subject to duplicative management fees. Although a Fund would do this only in seeking to avoid losses, the Fund will be unable to pursue its investment objective during that time, and it could reduce the benefit from any upswing in the market.

ADDITIONAL INFORMATION ABOUT INVESTMENTS AND RISKS

shares of closed-end funds may trade at a price per share which is more or less than the NAV per share, the difference representing the “market premium” and the “market discount” of such common shares, respectively.

There can be no assurance that a market discount on common shares of any closed-end fund will ever decrease. In fact, it is possible that this market discount may increase and the Funds may suffer realized or unrealized capital losses due to further decline in the market price of the securities of such closed-end funds, thereby adversely affecting the NAV of that fund’s shares. Similarly, there can be no assurance that the common shares of closed-end funds which trade at a premium will continue to trade at a premium or that the premium will not decrease subsequent to a purchase of such shares by the Funds. The Funds may also invest in preferred shares of closed-end funds.

An investor in the Funds should recognize that he may invest directly in closed-end funds and that by investing in closed-end funds indirectly through the Funds he will bear not only his proportionate share of the expenses of the Funds (including operating costs and investment advisory and administrative fees) but also, indirectly, similar fees of the underlying closed-end funds. An investor may incur increased tax liabilities by investing in the Funds rather than directly in the underlying funds.

Business Development Companies (BDCs) and Special Purpose Acquisition Companies (SPACs). The Funds may invest in BDCs and SPACs. Federal securities laws impose certain restraints upon the organization and operations of BDCs and SPACs. For example, BDCs are required to invest at least 70% of their total assets primarily in securities of private companies or in thinly traded U.S. public companies, cash, cash equivalents, U.S. government securities and high quality debt instruments that mature in one year or less. SPACs typically hold 85% to 100% of the proceeds raised from their IPO in trust to be used at a later date for a merger or acquisition. The SPAC must sign a letter of intent for a merger or acquisition within 18 months of the IPO. Otherwise it will be forced to dissolve and return the assets held in the trust to the public stockholders. However, if a letter of intent is signed within 18 months, the SPAC can close the transaction within 24 months. In addition, the target of the acquisition must have a fair market value that is equal to at least 80% of the SPAC’s assets at the time of acquisition and a majority of shareholders voting must approve this combination with no more than 20% of the shareholders voting against the acquisition and requesting their money back. When a deal is proposed, a shareholder can stay with the transaction by voting for it or elect to sell his shares in the SPAC if voting against it. SPACs are more transparent than private equity as they may be subject to certain SEC regulations, including registration statement requirements under the Securities Act of 1933 and 10-K, 10-Q and 8-K financial reporting requirements. Since SPACs are publicly traded, they provide limited liquidity to an investor (i.e. investment comes in the form of common shares and warrants which can be traded). Other than the risks normally associated with IPOs, SPACs’ public shareholders’ risks include limited liquidity of their securities (as shares are generally thinly traded), loss of 0-15% of their investments (resulting from the SPACs operating costs) if no deals are made and lack of investment diversification as assets are invested in a single company.

Options on Securities. Each Fund may purchase put or call options on equity securities (including securities of ETFs). Each Fund may also write call options and put options on stocks only if they are covered, as described below, and such options must remain covered so long as the Fund is obligated as a writer. Option transactions can be executed either on a national exchange or through a private transaction with a broker-dealer (an “over-the-counter” transaction). Each Fund may write (sell) “covered” call options and purchase options in a spread to hedge (cover) written options, and to close out options previously written by it.

A call option gives the holder (buyer) the “right to purchase” a security at a specified price (the exercise price) at any time until a certain date (the expiration date). So long as the obligation of the writer (seller) of a call option continues, the writer may be assigned an exercise notice by the broker-dealer through whom such option was sold, requiring the writer to deliver the underlying security against payment of the exercise price. This obligation terminates upon the expiration of the call option, or such earlier time at which the writer effects a closing purchase transaction by purchasing an option identical to that previously sold. To secure the obligation to deliver the underlying security upon exercise of a call option subject to the Options Clearing Corporation (“OCC”), a writer is required to deposit in escrow the underlying security or other assets in accordance with OCC rules.

The purpose of writing covered call options is to generate additional premium income for a Fund. This premium income will serve to enhance a Fund’s total return and will reduce the effect of any price decline of the

security involved in the option. Covered call options will generally be written on securities which, in the opinion of the advisor, are not expected to make any major price moves in the near future but which, over the long term, are deemed to be attractive investments for the particular Fund.

A Fund may write only call options that are “covered” or for which the Fund has segregated liquid assets equal to the exercise liability of the option that are adjusted daily to the option’s current market value. A call option is “covered” if the Fund either owns the underlying security or has an absolute and immediate right (such as a call with the same or a later expiration date) to acquire that security. In addition, a Fund will not permit the call to become uncovered without segregating liquid assets as described above prior to the expiration of the option or termination through a closing purchase transaction as described below. If a Fund writes a call option, the purchaser of the option has the right to buy (and the Fund has the obligation to sell) the underlying security at the exercise price throughout the term of the option. The initial amount paid to a Fund by the purchaser of the option is the “premium”. A Fund’s obligation as the writer of a call option to deliver the underlying security against payment of the exercise price will terminate either upon expiration of the option or earlier if the Fund is able to effect a “closing purchase transaction” through the purchase of an equivalent option. There can be no assurance that a closing purchase transaction can be effected at any particular time or at all. A Fund would not be able to effect a closing purchase transaction after it had received notice of exercise. Fund securities on which call options may be written will be purchased solely on the basis of investment considerations consistent with a Fund’s investment objective. The writing of covered call options is a conservative investment technique believed to involve relatively little risk (in contrast to the writing of naked or uncovered options, which the Funds will not do unless the Fund arranges to have its Custodian segregate sufficient cash or liquid assets as described above), but capable of enhancing a Fund’s total return. When writing a covered call option, a Fund, in return for the premium, gives up the opportunity for profit from a price increase in the underlying security above the exercise price, but retains the risk of loss should the price of the security decline. Unlike one who owns securities not subject to an option, a Fund has no control over when the Fund may be required to sell the underlying securities, since it may be assigned an exercise notice at any time prior to the expiration of its obligation as a writer. If a call option which a Fund has written expires, the Fund will realize a gain in the amount of the premium; however, such gain may be offset by a decline in the market value of the underlying security during the option period. If the call option is exercised, the Fund will realize a gain or loss from the sale of the underlying security. The security, cash or other liquid assets covering the call will be maintained either in a segregated status by the Fund’s Custodian or on deposit in escrow in accordance with OCC rules.

The premium received is the market value of an option. The premium a Fund will receive from writing a call option will reflect, among other things, the current market price of the underlying security, the relationship of the exercise price to such market price, the historical price volatility of the underlying security, and the length of the option period. Once the decision to write a call option has been made, the advisor, in determining whether a particular call option should be written on a particular security, will consider the reasonableness of the anticipated premium and the likelihood that a liquid secondary market will exist for such option. The premium received by a Fund for writing covered call options will be recorded as a liability in the Fund’s statement of assets and liabilities. This liability will be adjusted daily to the option’s current market value which is the mean of the closing bid and asked prices, after closing rotation is completed (*i.e.*, after such closing prices are computed, currently at 4:02 p.m. and 4:15 p.m., depending on the type of contract), the closing prices as of the time at which the net asset value per share of the Fund is computed (the close of the New York Stock Exchange). The liability will be extinguished upon expiration of the option, the purchase of an identical option in a closing transaction, or delivery of the underlying security upon the exercise of the option.

Closing transactions will be effected in order to realize a profit on an outstanding call option, to prevent an underlying security from being called, or to permit the sale of the underlying security. Furthermore, effecting a closing transaction will permit a Fund to write another call option on the underlying security with either a different exercise price or expiration date or both. If a Fund desires to sell a particular security from its portfolio on which it has written a call option, and it does not wish to segregate cash or other liquid assets equal in value to the exercise liability of the option adjusted daily to the option’s current market value, the Fund will seek to effect a closing transaction prior to, or concurrently with, the sale of the security. There is, of course, no assurance that a Fund will be able to effect such closing transactions at a favorable price. If a Fund cannot effect such a closing transaction, and it does not wish to segregate cash or other liquid assets equal in value to the exercise liability of the option adjusted daily to the option’s current market value, the Fund may be required to hold a security that it might otherwise have sold, in which case it would continue to be at market risk on the security. A Fund will pay transaction costs in

the option. The initial amount paid by a Fund to the seller of the call option is known as the “premium”. If during the period of the option the market price of the underlying security remains at or below the exercise price, a Fund will be able to purchase the security at the lower market price. The profit or loss a Fund may realize on the eventual sale of a security purchased by means of the exercise of a call option will be reduced by the premium paid for the call option. If, during the period of the call option, the market price for the underlying security is at or below the call option’s strike price, the call option will expire worthless, representing a loss of the price a Fund paid for the call option, plus transaction costs.

Stock Index Options. Except as described below, a Fund will write call options on stock indexes only if on such date it holds a portfolio of stocks at least equal to the value of the index times the multiplier times the number of contracts or the Fund arranges with its Custodian to segregate cash or other liquid assets equal in value to the exercise liability of the call option adjusted daily to the option’s current market value. When a Fund writes a call option on a broadly-based stock market index, it will segregate with its custodian, and/or pledge to a broker as collateral for the option, any combination of “qualified securities” (which consists of cash, U.S. Government securities or other liquid securities) with a market value at the time the option is written of not less than 100% of the current index value times the multiplier times the number of contracts.

If at the close of business on any business day the market value of such qualified securities so segregated or pledged falls below 100% of the current stock index value times the multiplier times the number of contracts, a Fund will so segregate and/or pledge an amount in cash or other liquid assets or securities equal in value to the difference. However, if a Fund holds a call on the same index as the call written where the exercise price of the call held is equal to or less than the exercise price of the call written or greater than the exercise price of the call written if the difference is maintained in cash, short-term U.S. Government securities, or other liquid securities (including common stocks) in a segregated account with the Custodian, it will not be subject to the requirements described in this section.

Risks of Transactions in Stock Options. Purchase and sales of options involves the risk that there will be no market in which to effect a closing transaction. An option position may be closed out only on an exchange that provides a secondary market for an option of the same series or if the transaction was an over-the-counter transaction, through the original broker-dealer. Although a Fund will generally buy and sell options for which there appears to be an active secondary market, there is no assurance that a liquid secondary market on an exchange will exist for any particular option, or at any particular time, and for some options no secondary market on an exchange may exist. If the Fund, as a covered call or put option writer, is unable to effect an offsetting closing transaction in a secondary market, and does not arrange with its Custodian to segregate cash or other liquid assets equal in value to the Fund’s exercise liability of the option adjusted daily to the option’s current market value, it will, for a call option it has written, not be able to sell the underlying security until the call option expires and, for a put option it has written, not be able to avoid purchasing the underlying security until the put option expires.

Risks of Options on Stock Indexes. Each Fund’s purchase and sale of options on stock indexes will be subject to risks described above under “Risks of Transactions in Stock Options”. In addition, the distinctive characteristics of options on stock indexes create certain risks that are not present with stock options.

Since the value of a stock index option depends upon the movements in the level of the stock index, rather than the price of a particular stock, whether a Fund will realize a gain or loss on the purchase or sale of an option on a stock index depends upon movements in the level of stock prices in the stock market generally or in an industry or market segment rather than movements in the price of a particular stock. Accordingly, successful use by a Fund of options on stock indexes is subject to the advisor’s ability to correctly predict movements in the direction of the stock market generally or of a particular industry or market segment. This requires skills and techniques different from predicting changes in the price of individual stocks.

Stock index prices may be distorted if trading of certain stocks included in the stock index is interrupted. Trading in the stock index options also may be interrupted in certain circumstances, such as if trading were halted in a substantial number of stocks included in the stock index. If this occurred, a Fund would not be able to close out options that it had purchased or written and, if restrictions on exercise were imposed, might not be able to exercise an option that it was holding, which could result in substantial losses to the Fund. It is the policy of each Fund to

purchase or write options only on stock indexes that include a number of stocks sufficient to minimize the likelihood of a trading halt in the stock index, for example, the S&P 100 or S&P 500 index option.

Trading in stock index options commenced in April 1983 with the S&P 100 option (formerly called the CBOE 100). Since that time, a number of additional stock index option contracts have been introduced, including options on industry stock indexes. Although the markets for certain stock index option contracts have developed rapidly, the markets for other stock index options are still relatively illiquid. The ability to establish and close out positions on such options will be subject to the development and maintenance of a liquid secondary market. It is not certain that this market will develop in all stock index option contracts. Fund will not purchase or sell stock index option contracts unless and until, in the advisor's opinion, the market for such options has developed sufficiently that the risk in connection with these transactions is no greater than the risk in connection with options on stock.

Hedging. Hedging is a means of transferring risk that an investor does not wish to assume during an uncertain market environment. The Funds are permitted to enter into these transactions solely: (a) to hedge against changes in the market value of portfolio securities and against changes in the market value of securities intended to be purchased, (b) to close out or offset existing positions, or (c) to manage the duration of a portfolio's fixed income investments.

Hedging activity in a Fund may include buying or selling (writing) put or call options on stocks, shares of exchange traded funds or stock indexes, entering into stock index futures contracts or buying or selling options on stock index futures contracts or financial futures contracts, such as futures contracts on U.S. Treasury securities and interest related indices, and options on financial futures. The Fund will buy or sell options on stock index futures traded on a national exchange or board of trade and options on securities and on stock indexes traded on national securities exchanges or through private transactions directly with a broker-dealer. The Fund may hedge a portion of its portfolio by selling stock index futures contracts or purchasing puts on these contracts to limit exposure to an actual or anticipated market decline. A Fund may hedge against fluctuations in currency exchange rates, in connection with its investments in foreign securities, by purchasing foreign forward currency exchange contracts. All hedging transactions must be appropriate for reduction of risk and they cannot be for speculation.

The Funds may engage in transactions in futures contracts and options on futures contracts.

Regulation as a Commodity Pool Operator. The Catalyst/Auctos Multi-Strategy Fund and the Catalyst Hedged Commodity Strategy Fund and their respective Subsidiaries are "commodity pools" under the U.S. Commodity Exchange Act ("CEA"), and the Advisor is registered as a "commodity pool operator" with the Commodity Futures Trading Commission ("CFTC") and is a member of the National Futures Association ("NFA"). As a registered commodity pool operator with respect to the Catalyst/Auctos Multi-Strategy Fund and the Catalyst Hedged Commodity Strategy Fund and their respective Subsidiaries, the Advisor must comply with various regulatory requirements under the CEA, and the rules and regulations of the CFTC and the NFA, including investor protection requirements, antifraud prohibitions, disclosure requirements, and reporting and recordkeeping requirements. The Advisor is also subject to periodic inspections and audits by the CFTC and NFA.

The Trust, with respect to the series not named above, has filed, on behalf of each such series, with the National Futures Association, a notice claiming an exclusion from the definition of the term "commodity pool operator" under the Commodity Exchange Act, as amended ("CEA"), and the rules of the Commodity Futures Trading Commission ("CFTC") promulgated thereunder, with respect to each Fund's operations. Accordingly, such series are not currently subject to registration or regulation as a commodity pool operator.

Convertible Securities. The Funds may invest in convertible securities, including debt securities or preferred stock that may be converted into common stock or that carry the right to purchase common stock. Convertible securities entitle the holder to exchange the securities for a specified number of shares of common stock, usually of the same company, at specified prices within a certain period of time. They also entitle the holder to receive interest or dividends until the holder elects to exercise the conversion privilege.

The terms of any convertible security determine its ranking in a company's capital structure. In the case of subordinated convertible debentures, the holder's claims on assets and earnings are generally subordinate to the claims of other creditors, and senior to the claims of preferred and common stockholders. In the case of convertible

dispose of these securities and may limit its ability to obtain accurate market quotations for purposes of determining the value of its assets. If the Fund is not able to obtain precise or accurate market quotations for a particular security, it will become more difficult to value its portfolio, requiring them to rely more on judgment. Less liquid secondary markets may also affect a Fund's ability to sell securities at their fair value. Each Fund may invest up to 15% of its net assets, measured at the time of investment, in illiquid securities, which may be more difficult to value and to sell at fair value. If the secondary markets for high yield debt securities are affected by adverse economic conditions, the proportion of a Fund's assets invested in illiquid securities may increase.

In the case of corporate debt securities, while the market values of securities rated below investment grade and comparable unrated securities tend to react less to fluctuations in interest rate levels than do those of higher-rated securities, the market values of certain of these securities also tend to be more sensitive to individual corporate developments and changes in economic conditions than higher-rated securities. Price volatility in these securities will be reflected in a Fund's share value. In addition, such securities generally present a higher degree of credit risk. Issuers of these securities often are highly leveraged and may not have more traditional methods of financing available to them, so that their ability to service their debt obligations during an economic downturn or during sustained periods of rising interest rates may be impaired. The risk of loss due to default by such issuers is significantly greater than with investment grade securities because such securities generally are unsecured and frequently are subordinated to the prior payment of senior indebtedness.

A description of the quality ratings of certain NRSROs is contained in Appendix A.

Zero Coupon Securities. The Funds may invest in "zero coupon" U.S. Treasury, foreign government and U.S. and foreign corporate convertible and nonconvertible debt securities, which are bills, notes and bonds that have been stripped of their unmatured interest coupons and custodial receipts or certificates of participation representing interests in such stripped debt obligations and coupons. A zero coupon security pays no interest to its holder prior to maturity. Accordingly, such securities usually trade at a deep discount from their face or par value and will be subject to greater fluctuations of market value in response to changing interest rates than debt obligations of comparable maturities that make current distributions of interest. Each Fund anticipates that it will not normally hold zero coupon securities to maturity. Redemption of shares of the Fund that require it to sell zero coupon securities prior to maturity may result in capital gains or losses that may be substantial. Federal tax law requires that a holder of a zero coupon security accrue a portion of the discount at which the security was purchased as income each year, even though the holder receives no interest payment on the security during the year. Such accrued discount will be includible in determining the amount of dividends the Fund must pay each year and, in order to generate cash necessary to pay such dividends, the Fund may liquidate portfolio securities at a time when it would not otherwise have done so.

Forward Foreign Currency Exchange Contracts. A Fund may enter into forward foreign currency exchange contracts in connection with its investments in foreign securities. A forward contract may be used by a Fund only to hedge against possible variations in exchange rates of currencies in countries in which it may invest. A forward foreign currency exchange contract ("forward contract") involves an obligation to purchase or sell a specific currency at a future date, which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. Forward contracts are traded in the interbank market directly between currency traders (usually large commercial banks) and their customers. A forward contract generally has no deposit requirement, and no commissions are charged at any stage for trades.

Futures Contracts. Each Fund may invest in futures contracts and options thereon (stock index futures contracts, interest rate futures contracts or currency futures contracts or options thereon) to hedge or manage risks associated with the Fund's securities investments. When a futures contract is executed, each party deposits with a futures commission merchant ("FCM") or broker ("Custodian"), or in a segregated custodial account, a specified percentage of the contract amount, called the initial margin, and during the term of the contract, the amount of the deposit is adjusted based on the current value of the futures contract by payments of variation margin to or from the FCM or broker or segregated custodial account. In the case of options on futures, the holder of the option pays a premium and receives the right, upon exercise of the option at a specified price during the option period, to assume the option writer's position in the futures contract and related margin account. If the option is exercised on the last trading day, cash in an amount equal to the difference between the option exercise price and the closing level of the relevant index, interest rate or currency price, as applicable, on the expiration date is delivered.

As required by the 1940 Act, a Fund may purchase or sell futures contracts or options thereon only if the Fund's liability for the futures position is "covered" by an offsetting position in a futures contract or option thereon, or by the Fund's segregating liquid assets equal to the Fund's liability on the futures contract or option thereon, which are adjusted daily to equal the current market value of Fund's liability on the futures contract or option thereon. To enter into a futures contract, an amount of cash, U.S. Government securities, or other liquid securities or assets, equal to the market value of the futures contract, is segregated with the Custodian and/or in a margin account with a FCM or broker, and this amount of cash or cash equivalents is adjusted daily to the current market value of the futures contract to collateralize the position and thereby ensure that the use of such futures is unleveraged. Alternatively, a Fund may cover such positions by purchasing offsetting positions, or by using a combination of offsetting positions and cash or other liquid securities or assets.

Positions in futures contracts may be closed out only on an exchange that provides a secondary market for such futures. However, there can be no assurance that a liquid secondary market will exist for any particular futures contract at any specific time. Thus, it may not be possible to close a futures position. In the event of adverse price movements, a Fund would continue to be required to make daily cash payments to maintain its required margin. In such situations, if a Fund had insufficient cash, it might have to sell portfolio securities to meet daily margin requirements at a time when it would be disadvantageous to do so. In addition, a Fund might be required to make delivery of the instruments underlying futures contracts it holds. The inability to close positions in futures or options thereon also could have an adverse impact on a Fund's ability to hedge or manage risks effectively.

Successful use of futures by a Fund is also subject to the advisor's ability to predict movements correctly in the direction of the market. There is typically an imperfect correlation between movements in the price of the future and movements in the price of the securities that are the subject of the hedge. In addition, the price of futures may not correlate perfectly with movement in the cash market due to certain market distortions. Due to the possibility of price distortion in the futures market and because of the imperfect correlation between the movements in the cash market and movements in the price of futures, a correct forecast of general market trends or interest rate movements by the advisor may still not result in a successful hedging transaction over a short time frame.

The trading of futures contracts is also subject to the risk of trading halts, suspension, exchange or clearing house equipment failures, government intervention, insolvency of a commodities or brokerage firm or clearing house or other disruption of normal trading activity, which could at times make it difficult or impossible to liquidate existing positions or to recover excess variation margin payments.

The purchase and sale of futures contracts or related options will not be a primary investment technique of the Funds. A Fund will purchase or sell futures contracts (or related options thereon) in accordance with the CFTC regulations described above.

Interest Rate Futures. A Fund may purchase an interest rate futures contract as a hedge against changes in interest rates. An interest rate futures contract provides for the future sale by one party and the purchase by the other party of a certain amount of a specific interest rate sensitive financial instrument (debt security) at a specified price, date, time and place. Generally, if market interest rates increase, the value of outstanding debt securities declines (and vice versa). Thus, if a Fund holds long-term debt obligations and the advisor anticipates a rise in long-term interest rates, the Fund could, instead of selling its debt obligations, enter into an interest rate futures contract for the sale of similar long-term securities. If interest rates rise, the value of the futures contract would also rise, helping to offset the price decline of the obligations held by the Fund. A Fund might also purchase futures contracts as a proxy for underlying securities that it cannot currently buy.

Stock Index Futures. A Fund may purchase and sell stock index futures contracts as a hedge against changes resulting from market conditions in the values of securities that are held in its portfolio or that it intends to purchase or when such purchase or sale is economically appropriate for the reduction of risks inherent in the ongoing management of the Fund. A stock index futures contract is an agreement in which one party agrees to deliver to the other an amount of cash equal to a specific dollar amount times the difference between the value of a specific stock index at the close of the last trading day of the contract and the price at which the agreement is made.

A Fund may hedge a portion of its portfolio by selling stock index futures contracts or purchasing puts on these contracts to limit exposure to an actual or anticipated market decline. This provides an alternative to liquidation of securities positions. Conversely, during a market advance or when the advisor anticipates an advance, a Fund may hedge a portion of its portfolio by purchasing stock index futures, or options on these futures. This affords a hedge against a Fund not participating in a market advance when it is not fully invested and serves as a temporary substitute for the purchase of individual securities, which may later be purchased in a more advantageous manner.

A Fund's successful use of stock index futures contracts depends upon the advisor's ability to predict the direction of the market and is subject to various additional risks. The correlation between movement in the price of the stock index future and the price of the securities being hedged is imperfect and the risk from imperfect correlation increases as the composition of a Fund's portfolio diverges from the composition of the relevant index. In addition, if a Fund purchases futures to hedge against market advances before it can invest in common stock in an advantageous manner and the market declines, there may be a loss on the futures contracts. In addition, the ability of a Fund to close out a futures position or an option on futures depends on a liquid secondary market. There is no assurance that liquid secondary markets will exist for any particular futures contract or option on a futures contract at any particular time. The risk of loss to a Fund is theoretically unlimited when the Fund sells an uncovered futures contract because there is an obligation to make delivery unless the contract is closed out, regardless of fluctuations in the price of the underlying security.

Foreign Currency Futures Transactions. Unlike forward foreign currency exchange contracts, foreign currency futures contracts and options on foreign currency futures contract are standardized as to amount and delivery period and may be traded on boards of trade and commodities exchanges or directly with a dealer which makes a market in such contracts and options. It is anticipated that such contracts may provide greater liquidity and lower cost than forward foreign currency exchange contracts. As part of their financial futures transactions, the Funds may use foreign currency futures contracts and options on such futures contracts. Through the purchase or sale of such contracts, the Funds may be able to achieve many of the same objectives as through investing in forward foreign currency exchange.

Foreign Currency Options. A foreign currency option provides the option buyer with the right to buy or sell a stated amount of foreign currency at the exercise price at a specified date or during the option period. A call option gives its owner the right, but not the obligation, to buy the currency, while a put option gives its owner the right, but not the obligation, to sell the currency. The option seller (writer) is obligated to fulfill the terms of the option sold if it is exercised. However, either seller or buyer may close its position during the option period in the secondary market for such options at any time prior to expiration.

A Fund may write only foreign currency options that are "covered" or for which the Fund has segregated liquid assets equal to the exercise liability of the option that are adjusted daily to the option's current market value. A call option is "covered" if the Fund either owns the underlying currency or has an absolute and immediate right (such as a call with the same or a later expiration date) to acquire that currency. A Fund may write put options on a fully covered basis on a currency the Fund intends to purchase or where the Fund arranges with its Custodian to segregate cash or other liquid asset equal in value to the exercise liability of the put option adjusted daily to the option's current market value. In addition, a Fund will not permit the option to become uncovered without segregating liquid assets as described above prior to the expiration of the option or termination through a closing purchase transaction as described in "*Options on Securities*" above.

A foreign currency call option rises in value if the underlying currency appreciates. Conversely, a foreign currency put option rises in value if the underlying currency depreciates. While purchasing a foreign currency option may protect a Fund against an adverse movement in the value of a foreign currency, it would not limit the gain which might result from a favorable movement in the value of the currency. For example, if a Fund were holding securities denominated in an appreciating foreign currency and had purchased a foreign currency put to hedge against a decline in the value of the currency, it would not have to exercise its put. In such an event, however, the amount of the Fund's gain would be offset in part by the premium paid for the option. Similarly, if a Fund entered into a contract to purchase a security denominated in a foreign currency and purchased a foreign currency call to hedge against a rise in the value of the currency between the date of purchase and the settlement date, the Fund would not need to exercise its call if the currency instead depreciated in value. In such a case, the Fund would

acquire the amount of foreign currency needed for settlement in the spot market at a lower price than the exercise price of the option.

REITs. The Funds may invest in securities of real estate investment trusts (“REITs”). REITs are publicly traded corporations or trusts that specialize in acquiring, holding and managing residential, commercial or industrial real estate. A REIT is not taxed at the entity level on income distributed to its shareholders or unitholders if it distributes to shareholders or unitholders at least 95% of its taxable income for each taxable year and complies with regulatory requirements relating to its organization, ownership, assets and income.

REITs generally can be classified as “Equity REITs”, “Mortgage REITs” and “Hybrid REITs.” An Equity REIT invests the majority of its assets directly in real property and derives its income primarily from rents and from capital gains on real estate appreciation which are realized through property sales. A Mortgage REIT invests the majority of its assets in real estate mortgage loans and services its income primarily from interest payments. A Hybrid REIT combines the characteristics of an Equity REIT and a Mortgage REIT. Although the Fund can invest in all three kinds of REITs, its emphasis is expected to be on investments in Equity REITs.

Investments in the real estate industry involve particular risks. The real estate industry has been subject to substantial fluctuations and declines on a local, regional and national basis in the past and may continue to be in the future. Real property values, and income from real property continue to be in the future. Real property values and income from real property may decline due to general and local economic conditions, overbuilding and increased competition, increases in property taxes and operating expenses, changes in zoning laws, casualty or condemnation losses, regulatory limitations on rents, changes in neighborhoods and in demographics, increases in market interest rates, or other factors. Factors such as these may adversely affect companies that own and operate real estate directly, companies that lend to such companies, and companies that service the real estate industry.

Direct investments in REITs also involve risks. Equity REITs will be affected by changes in the values of and income from the properties they own, while Mortgage REITs may be affected by the credit quality of the mortgage loans they hold. In addition, REITs are dependent on specialized management skills and on their ability to generate cash flow for operating purposes and to make distributions to shareholders or unitholders. REITs may have limited diversification and are subject to risks associated with obtaining financing for real property, as well as to the risk of self-liquidation. REITs also can be adversely affected by their failure to qualify for tax-free pass-through treatment of their income under the Internal Revenue Code of 1986, as amended, or their failure to maintain an exemption from registration under the 1940 Act. By investing in REITs indirectly through a Fund, a shareholder bears not only a proportionate share of the expenses of the Fund, but also may indirectly bear similar expenses of some of the REITs in which it invests.

Structured Securities. The Funds may purchase any type of publicly traded or privately negotiated fixed income security, including mortgage-backed securities; structured notes, bonds or debentures; and assignments of and participations in loans.

Mortgage-Backed Securities. The Funds may invest in mortgage-backed securities, such as those issued by the Government National Mortgage Association (“GNMA”), Federal National Mortgage Association (“FNMA”), Federal Home Loan Mortgage Corporation (“FHLMC”) or certain foreign issuers. Mortgage-backed securities represent direct or indirect participations in, or are secured by and payable from, mortgage loans secured by real property. The mortgages backing these securities include, among other mortgage instruments, conventional 30-year fixed-rate mortgages, 15-year fixed-rate mortgages, graduated payment mortgages and adjustable rate mortgages. The government or the issuing agency typically guarantees the payment of interest and principal of these securities. However, the guarantees do not extend to the securities’ yield or value, which are likely to vary inversely with fluctuations in interest rates, nor do the guarantees extend to the yield or value of a Fund’s shares. These securities generally are “pass-through” instruments, through which the holders receive a share of all interest and principal payments from the mortgages underlying the securities, net of certain fees.

Yields on pass-through securities are typically quoted by investment dealers and vendors based on the maturity of the underlying instruments and the associated average life assumption. The average life of pass-through pools varies with the maturities of the underlying mortgage loans. A pool’s term may be shortened by unscheduled or early payments of principal on the underlying mortgages. The occurrence of mortgage prepayments is affected by

DISCLOSURE OF PORTFOLIO HOLDINGS

The Funds' Board of Trustees has adopted policies and procedures for the public and nonpublic disclosure of the Funds' portfolio securities. The Funds' portfolio holdings are currently disclosed to the public through filings with the SEC. The Funds disclose their portfolio holdings by mailing the annual and semi-annual reports to shareholders approximately two months after the end of the fiscal year and semi-annual period. In addition, the Funds disclose their portfolio holdings reports on Forms N-CSR and Form N-Q two months after the end of each quarter/semi-annual period.

As a general matter, no information concerning the portfolio holdings of the Funds may be disclosed to any unaffiliated third party except (1) to service providers that require such information in the course of performing their duties (for example, the Funds' custodian, administrator, investment advisor, sub-investment advisor, independent public accountants, attorneys, officers and trustees) and are subject to a duty of confidentiality including duties not to trade on non-public information, and (2) pursuant to certain exceptions that serve a legitimate business purpose. These exceptions may include: (1) disclosure of portfolio holdings only after such information has been publicly disclosed and (2) to third-party vendors, currently consisting of Morningstar Investment Services and Lipper Analytical Services that (a) agree to not distribute the portfolio holdings or results of the analysis to third parties, other departments or persons who are likely to use the information for purposes of purchasing or selling the Fund before the portfolio holdings or results of the analysis become publicly available; and (b) sign a written confidentiality agreement. The confidentiality agreement must provide, but is not limited to, that the recipient of the portfolio holdings information agrees to limit access to the portfolio holdings information to its employees who, on a need to know basis are (1) authorized to have access to the portfolio holdings information and (2) subject to confidentiality obligations, including duties not to trade on non-public information, no less restrictive than the confidentiality obligations contained in the confidentiality agreement.

Neither the Funds or the Advisor may enter into any arrangement providing for the disclosure of non-public portfolio holding information for the receipt of compensation or benefit of any kind. Any exceptions to the policies and procedures may only be made by the consent of the Trust's chief compliance officer upon a determination that such disclosure serves a legitimate business purpose and is in the best interests of the Funds and will be reported to the Board at the Board's next regularly scheduled meeting.

TRUSTEES AND OFFICERS

The Board of Trustees manages the business and affairs of the Trust and appoints or elects officers responsible for the day-to-day operations of the Trust and the execution of policies established by Board resolution or directive. In the absence of such provisions, the respective officers have the powers and discharge the duties customarily held and performed by like officers of corporations similar in organization and business purposes.

The Trustees who are not "interested persons" (for regulatory purposes) of the Trust or an advisor or the Distributor (the "Independent Trustees") are charged with, among other functions, recommending to the full Board approval of the distribution, transfer agency and accounting services agreements and the investment advisory agreements. When considering approval of the existing advisory agreements, the Independent Trustees evaluate the nature and quality of the services provided by the advisor, the performance of the Funds, the advisor's costs and the profitability of the agreements to the advisor, ancillary benefits to the advisor or their affiliates in connection with its relationship to the Funds and the amount of fees charged in comparison to those of other investment companies.

The Board of Trustees currently has two standing committees: the Audit Committee and the Valuation Committee. Each committee is described below.

The term of office for each Trustee is for the duration of the Trust or until death, removal, resignation or retirement. The term of office of each officer is until the successor is elected.

Information pertaining to the Trustees and officers of the Trust, including their principal occupations for the last five years, is set forth below.

Independent Trustees

Name, Address Year of Birth	Position(s) Held with Registrant	Term and Length Served*	Principal Occupation (s) During Past 5 Years	Number of Portfolios Overseen In The Fund Complex	Other Directorships Held During Past 5 Years
Tobias Caldwell c/o Mutual Fund Series Trust 17605 Wright Street, Omaha NE 68130 Year of Birth: 1967	Trustee	Since 6/2006	Manager of Genovese Family Enterprises, a real estate firm, since 1999. Managing Member of PTL Real Estate LLC, a real estate/investment firm, since 2000. Managing Member of Bear Properties, LLC, a real estate firm, since 2006. President of Genovese Imports, an importer/distributor of wine, from 2005 to 2011.	43	Variable Insurance Trust since 2010
Tiberiu Weisz c/o Mutual Fund Series Trust 17605 Wright Street, Omaha NE 68130 Year of Birth: 1949	Trustee	Since 6/2006	Retired, Attorney with and shareholder of Gottlieb, Rackman & Reisman, P.C., from 1994 to 2015.	43	Variable Insurance Trust since 2010
Dr. Bert Pariser c/o MITCU Corporation 860 East Broadway, Suite 2D, Long Beach, NY 11561 Year of Birth: 1940	Trustee	Since 5/2007	Managing Partner of The MITCU Corporation, a technology consulting firm since 2004. Faculty Member Technical Career Institutes, since 1991.	43	Variable Insurance Trust since 2010

* The term of office of each Trustee is indefinite.

**The Trustee who is an “interested persons” of the Trust as defined in the 1940 Act is an interested person by virtue of being an officer of the Fund advisor.

Leadership Structure. The Trust is led by Mr. Jerry Szilagyi, who has served as the Chairman of the Board since 2010. Mr. Szilagyi is an interested person by virtue of his controlling interest in the Advisor and AlphaCentric Advisors LLC, investment advisers to other certain series of the Trust. The Board of Trustees is comprised of Mr. Szilagyi, an Interested Trustee, and Mr. Tobias Caldwell, Mr. Tiberiu Weisz and Dr. Bert Pariser, each an Independent Trustee. Effective July 2, 2015, Mr. Caldwell was appointed by the Board as the Lead Independent Trustee. The Lead Independent Trustee serves as a key point person for dealings between management and the Independent Trustees and assists in setting the agendas for Board meetings. The Independent Trustees meet in executive session at each Board meeting. Under the Trust’s bylaws and governance guidelines, the Chairman of the Board is responsible for (a) chairing Board meetings, (b) setting the agendas for these meetings and (c) providing information to Board members in advance of each Board meeting and between Board meetings. The Trustees believe this is the most appropriate leadership structure for the Trust given Mr. Szilagyi’s background in the investment management industry and his experience in providing both advisory and administrative services to other mutual funds. Additionally, as the Managing Member of MFund Services LLC, which provides management and administrative services to the Fund, Mr. Szilagyi is well positioned and informed regarding issues requiring the attention of the Board, and as the leader of the Board, can ensure such issues are included in the Board’s agenda for meetings and that appropriate time is allocated to discuss such issues and take any necessary actions.

Risk Oversight. In its risk oversight role, the Board oversees risk management, and the full Board engages in discussions of risk management and receives reports on investment and compliance risk at quarterly meetings and on an ad hoc basis, when and if necessary. The Board, directly or through its Audit Committee, reviews reports from among others, the advisors, sub-advisors, the Trust's Chief Compliance Officer, the Trust's independent registered public accounting firm, and the Independent Trustees' counsel, as appropriate, regarding risks faced by the Trust and the Fund and the risk management programs of the Trust, the advisors and certain service providers. The full Board regularly engages in discussions of risk management and receives compliance reports that inform its oversight of risk management from the Trust's Chief Compliance Officer at quarterly meetings and on an ad hoc basis, when and if necessary. The Trust's Chief Compliance Officer also meets at least quarterly in executive session with the Independent Trustees. The actual day-to-day risk management with respect to the Fund resides with the Fund's advisor and other service providers to the Fund. Although the risk management policies of the advisor and the service providers are designed to be effective, those policies and their implementation vary among service providers and over time, and there is no guarantee that they will be effective. Generally, the Board believes that its oversight of material risks is adequately maintained through the risk-reporting chain where the Chief Compliance Officer is the primary recipient and communicator of such risk-related information.

Audit Committee. Mr. Caldwell, Mr. Weisz and Dr. Pariser serve on the Board's Audit Committee. The Board's Audit Committee is a standing independent committee with a separate chair. The primary function of the Audit Committee is to assist the full Board in fulfilling its oversight responsibilities to the shareholders and the investment community relating to fund accounting, reporting practices and the quality and integrity of the financial reports. To satisfy these responsibilities, the Audit Committee reviews with the independent auditors, the audit plan and results and recommendations following independent audits, reviews the performance of the independent auditors and recommends engagement or discharge of the auditors to the full Board, reviews the independence of the independent auditors, reviews the adequacy of the Funds' internal controls and prepares and submits Committee meeting minutes and supporting documentation to the full Board. During the fiscal year ended June 30, 2015, the Audit Committee met four times.

Valuation Committee. The Valuation Committee is composed of (1) either the Trust's Treasurer or Assistant Treasurer and (2) either the Trust's Chief Compliance Officer or a Trustee that is independent of the adviser/sub-adviser and the fund involved in the subject valuation. The Valuation Committee is responsible for the valuation and revaluation of any portfolio investment for which market quotations or sale prices are not readily available. The Valuation Committee meets as is required. During the fiscal year ended June 30, 2015, the Valuation Committee held 23 meetings.

Background and Qualifications of the Trustees. Mr. Szilagyi is the managing member of the Advisor, an original sponsor of the Trust. Mr. Szilagyi is the Managing Member of AlphaCentric Advisors, LLC, an investment advisor to certain series of the Trust, and of MFund Services LLC, which provides management and administrative services to the Trust. Mr. Szilagyi has many years of experience managing mutual funds and providing administrative services to other mutual funds. His experience in the investment management industry makes him uniquely qualified to serve as the Trust's Chairman.

Mr. Caldwell is the manager of a real estate investment firm. Mr. Caldwell's experience in the real estate and investment industries provides the Board with an additional perspective and understanding of investment strategies used by advisors to the funds.

Mr. Weisz is an attorney and provides the Board with insight and experience regarding their duties and standards of care as well as legal procedures related to the Board's responsibilities.

Dr. Pariser is the managing partner of a technology consulting firm and has served on the Boards of many other companies. His experience with other Boards provides the Trustees with insight as to the manner in which matters are handled in other corporate settings, including the hiring and use of professionals such as counsel and audit firms.

Share Ownership in the Funds

Fund Shares Owned by Trustees as of December 31, 2014
